

PERMAGARD[®]

MARINE

WORLD LEADER IN THE TECHNOLOGY
OF PAINT PROTECTION AND GELCOAT

WHAT IS A PERMAGARD TREATMENT?

PERMAGARD is a specific, long-lasting protection process using a reactive polymer that is suitable for all types of paint and gel coats.

Once applied on painted surfaces by a certified technician, the PERMAGARD treatment creates a high quality protective coating with a glass-like finish that is extremely shiny and slick to the touch.

- Directly applicable to new paint.
- Protects exterior surfaces against continued absorption and damage from harsh contaminants such as :
Acid rain, bird lime, UV rays, fuel, exhaust fumes, grease, solvents, fine sand, salt, chemicals.
- Environmentally friendly as it reduces the use of detergents.
- Slows deterioration of paint.
- Restores oxidised paint.
- Protects paint from premature oxidation therefore extending the life of the paint.
- Greatly reduces the maintenance time required to keep the surfaces clean.
- Provides durable protection.
- Maintains a long-lasting shine.
- Gets rid of fine lines and polish marks.

- PERMAGARD is an environmentally friendly process with no pollution or noise during the application.
- PERMAGARD treated surfaces need only to be cleaned with water and environmentally friendly, biodegradable cleaners; no solvents are required.

- PERMAGARD reduces the need for respraying and repainting the yacht.
- No need to install costly protective tents and scaffolding. Application is extremely quick compared to respraying. Rejuvenate and protect a 50m yacht with PERMAGARD in less than two weeks for a fifth of the cost of a respray.

PERMANENT

- Seals the external finish
- Glossy and slick to the touch
- No need to polish
- Never needs to be compounded

PROTECTION

- Protects against fading and oxidisation
- Eliminates swirl marks
- Does not contain wax or silicone
- Does not create repaint problems

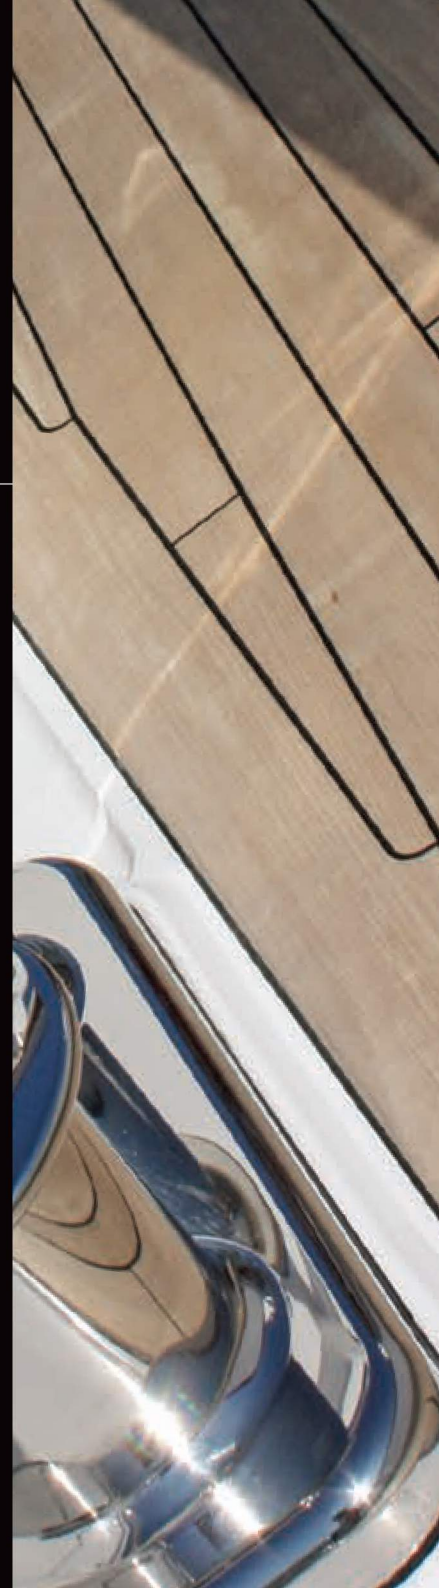

PERFORMANCE

- Reduces drag and improves performance
- Dramatically reduces maintenance
- Restores and revitalises paint and gel coat
- Exceptional, long-lasting shine

SERVICE TREATMENT

PERMAGARD recommends a Service treatment to be carried out once a year. The PERMAGARD Service treatment deep cleans and reinforces the original coating, repairing any damage which may have appeared over time, such as micro scratches created from the abrasion of fenders and cords. The Service Treatment application is easier, quicker and cheaper to apply than the Reactive Polymer coating. The service treatment formula is a low viscosity polymer formulation with cleaning capabilities especially formulated to be effective on PERMAGARD Reactive Polymer coated surfaces.

TEAK PROTECTION

PERMAGARD TEAK PROTECTOR is a fluorocopolymer water based treatment, specially developed for the protection of teak; PERMAGARD TEAK PROTECTOR penetrates into the wood and forms a protective coating, creating a hydrophobic (water repellent) and UV protection. The treatment provides an excellent protection against permanent stains. Liquid spills will pearls on treated surfaces and will only require to be wiped up. Treated surfaces are easier to clean and harder to wear down.

INTERIOR PROTECTION

- PERMAGARD also protects leather, fabric and vinyl surfaces.
- PERMAGARD treated surfaces are protected against stains, colour fading and wear. Leather is protected against cracking.
- Specific PERMAGARD treatments are available for all types of automotive, marine and aeronautical painted surfaces.

TECHNOLOGY

PERMAGARD's reactive polymer coatings bond chemically to the pores of the paintwork or gelcoat to seal and protect the surface. As the treated surface cures, the plasticised molecules elongate, interlocking with each other, resulting in tough bonded protective coating maintaining a durable high gloss finish.

GUARANTEE

- PERMAGARD, manufacturer of this treatment, guarantees that the coating will not interfere with any future paint respraying.
- All PERMAGARD technicians are expertly trained and regularly controlled to ensure that they are masters in the application of the treatment.
